down as worthlass.

It is a fact well known to all our Western citizens, that the miaem that is constantly present in the air of this rich Western country, and the changes which occur so frequently, from heat to cold, give rise to various forms of disease, and it becomes an important inquiry, then, to us, what we can do to prevent these sudden attacks, to which we are so liable? An old saying is "an ounce of prevention is worth a pound of cure," and in nothing is it truer than in this. For in however many forms we are attacked with illness, the primary cause is nearly the same. We catch cold, or over eat, the porces of the body leavener closed and the refuse matter which is generally thrown out of the system by sensible or insensible perspirations, remains in it and clogs it up, and the consequence is that the inward functions of the body cannot perform their duty, any more than a watch can, the cops of whose wheels are filled with dirt, Every part of our bodies demands its different element from the bod, and the part our stomachs takes is to eliminate such parts, and send them in their proper direction when our system is fully open, this is well and beautifully done, and such parts, and send them in their proper direction when our system is fully open, this is well and beautifully done, and such parts of our bodies,—but when cold, or other causes, steps these outlets, this offal (if we may so speak,) remains in the body; and Evers, Rheimanisma, Jaundice, Liver Complaint, Augue, Neuralgia, &c., &c., occur. What then shall we do? The answer is easy; cleanse the system theroughly, restore the natural cutlets, and we are free.—When shall we do it? Shall we want till the disease becomes set upon us? Not let us take
